CPAP Masks  
YF-01 Full Face Mask Family  
YN-02 Nasal Mask Family

# Clinical Studies Overview

## Six Months of Clinical Studies

### Details

- Each patient participated in a 12 night sleep study. Patients used 3 of the leading brand masks for 3 nights each, and a Rain8 mask for the final 3 nights.

### Results

- Rain8 masks improved patient's average AHI by over 80%.
- Rain8 mask seal was greater than 98%.

### Test Subjects

- We all know the patients that come in every few weeks or months to see if there's a new mask that they can swap theirs out for. These were our test subjects.
- We targeted our test subjects from our pool of people who have tried everything on the shelf and still weren't satisfied. Those are the patients we selected. Our selection criteria was: the more mask swaps, skin irritation issues, non-compliance, elevated AHI's and mask leaks the better.
- We did the most rigorous testing we could in attempt to truly determine if our masks would hold up or not. We selected males and females, young and old. Rain8 Masks performed better than other masks in the test and, subjectively speaking, better than 20 models we have used over the years.
- For DME providers Rain8 is the "Swiss Army knife" of CPAP masks because of its premium quality at a value price. We use it as our go-to mask because of its better quality, improved compliance, and patient satisfaction, while we also use it to save us lots of money by replacing the premium brand masks that we all spend so much of our profits on.
